

# Wireless module for crop measurement

The Wireless Value LC100 measures part of the steel wire on which the crop hooks hang. With two LC100 sensors, it is therefore possible to measure an entire section of crop. The LC100 is the ideal module for wireless weight measurement with high accuracy. The sensor is suspended between the greenhouse structure and the steel wire with crop hooks. The LC100 transmits the measured data in grams, which makes it easy to use.
